

I SAVE SEED FOR THE FUTURE

We will explore the nature with students and teachers from The Republic of North Macedonia, Italy and Turkey to convert the application of Biology -Geography lessons, also observe the nature and environment around us with this great project.

Students will follow and observe the the blooming of leaves and flowers and then how fruits are formed step by step. They will also follow how the seeds they planted germinate and grow. The students of the project will also learn that the fruit seeds they eat are not garbage. By bringing these seeds together with nature they will build a more green environment and world for the next generations.

THE WINNING POSTER

We **SAVE** seed for
THIS future
